PAPI

100% FRENCH MADE

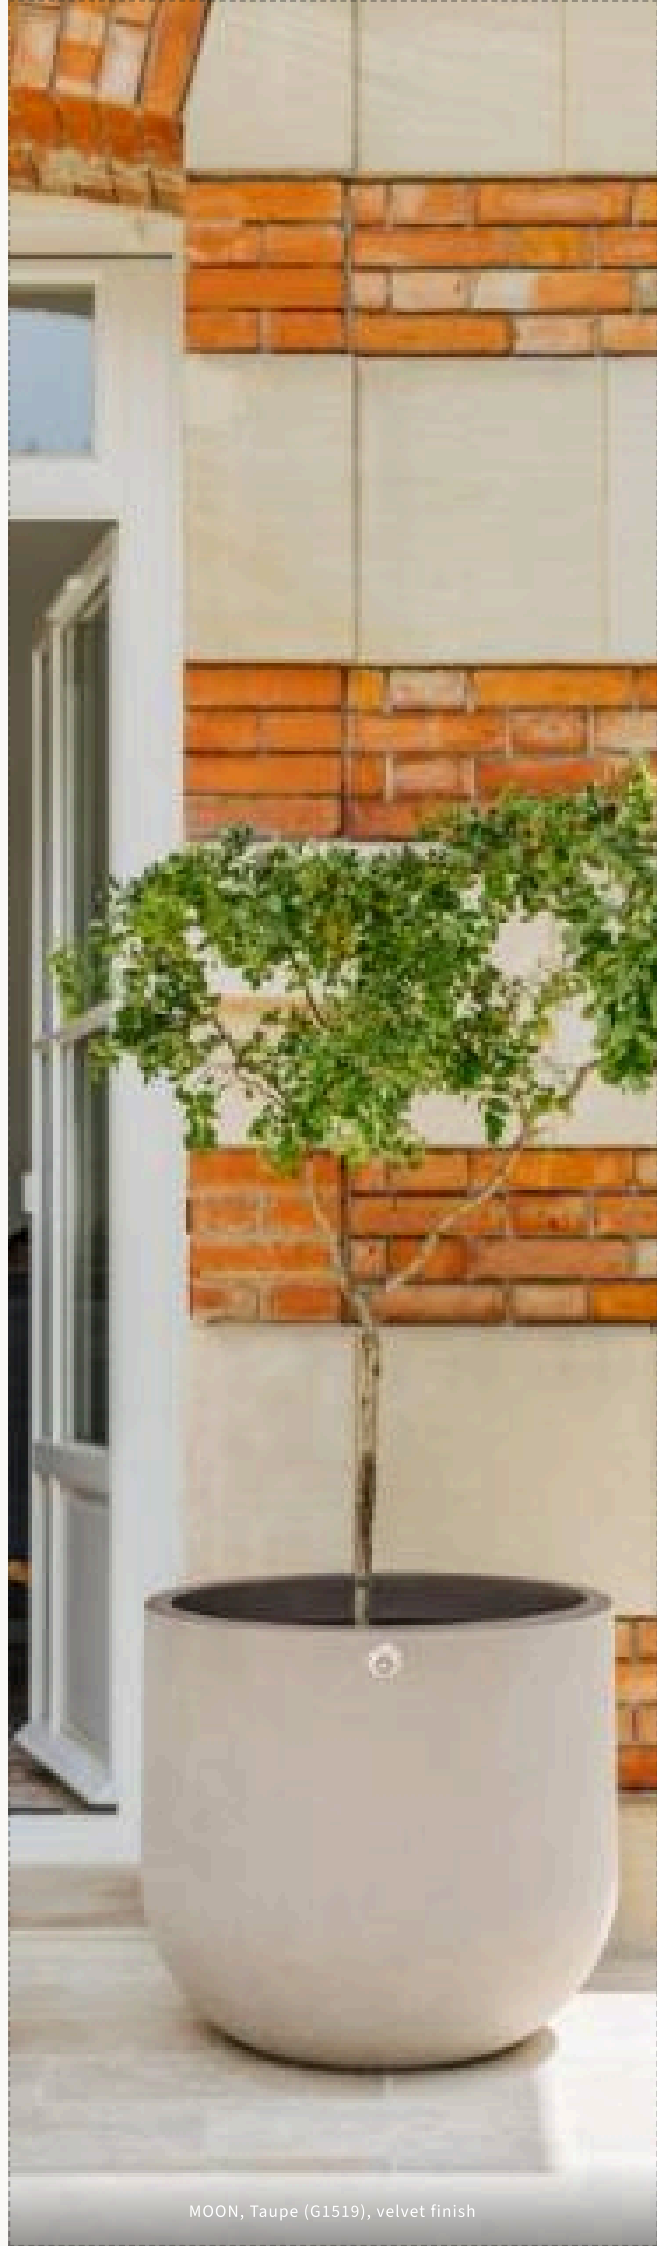

VOGUE ROUND, Corten finish

PAPI, a story of families

- 1904** In L'Isle-Adam, in the Val-d'Oise, Gilbert PAPI opens his first workshop, making advertising figurines and Terracotta and plaster statuettes for churches.
- 1950** Johnnie Walker, Pierrot Gourmand... manufacturing iconic advertising figures brings PAPI success in France and abroad.
- 1993** PAPI gains new momentum. Acquired by the FEREY family, the company develops a PAPI brand for urban planting, with a complete range of flower pots and balcony boxes designed for local authorities.
- 2005** The DECO round pot is born, alongside the development of ground-level planting.
- 2010** A recycling process is developed, for 100% recycled and recyclable manufacturing.
- 2015** Launch of the Corten finish.
- 2020** Recycling of our products collected from our customers.
- 2025** Introduction of the velvet finish.

TODAY

Since 1904, two families have led the company. From a terracotta figurine workshop to the pots and planters presented in the following pages, it has changed trades without changing hands. It remains independent and family-owned, based in Le Mesnil-en-Thelle, in the Oise.

Rotomoulded HDPE

Rotational moulding shapes HDPE by rotation, producing sturdy, long-lasting products. The material is mass-dyed, giving excellent UV stability. Our products have a wall thickness of 3 to 8 mm, which makes them particularly strong. Our entire range also carries a 10-year corrosion warranty, ensuring long life and consistent performance in all climates.

CAREFUL HAND FINISHING AND ASSEMBLY

We place great importance on the quality of our work. Every rotomoulded piece is handled with care and inspected at each stage of manufacturing.

COLOURS, MASS-DYED

100% recyclable and recycled

At PAPI, we give our products a second life. Since 2010, we have recycled 100% of our production offcuts, and we go further: we also take back your end-of-life pots, balcony boxes and planters to give them a new story.

Once collected, these products are cleaned, cut, shredded and micronised. The resulting powder goes back into our manufacturing cycle to create new products, including our black range, made 100% from this recycling stream.

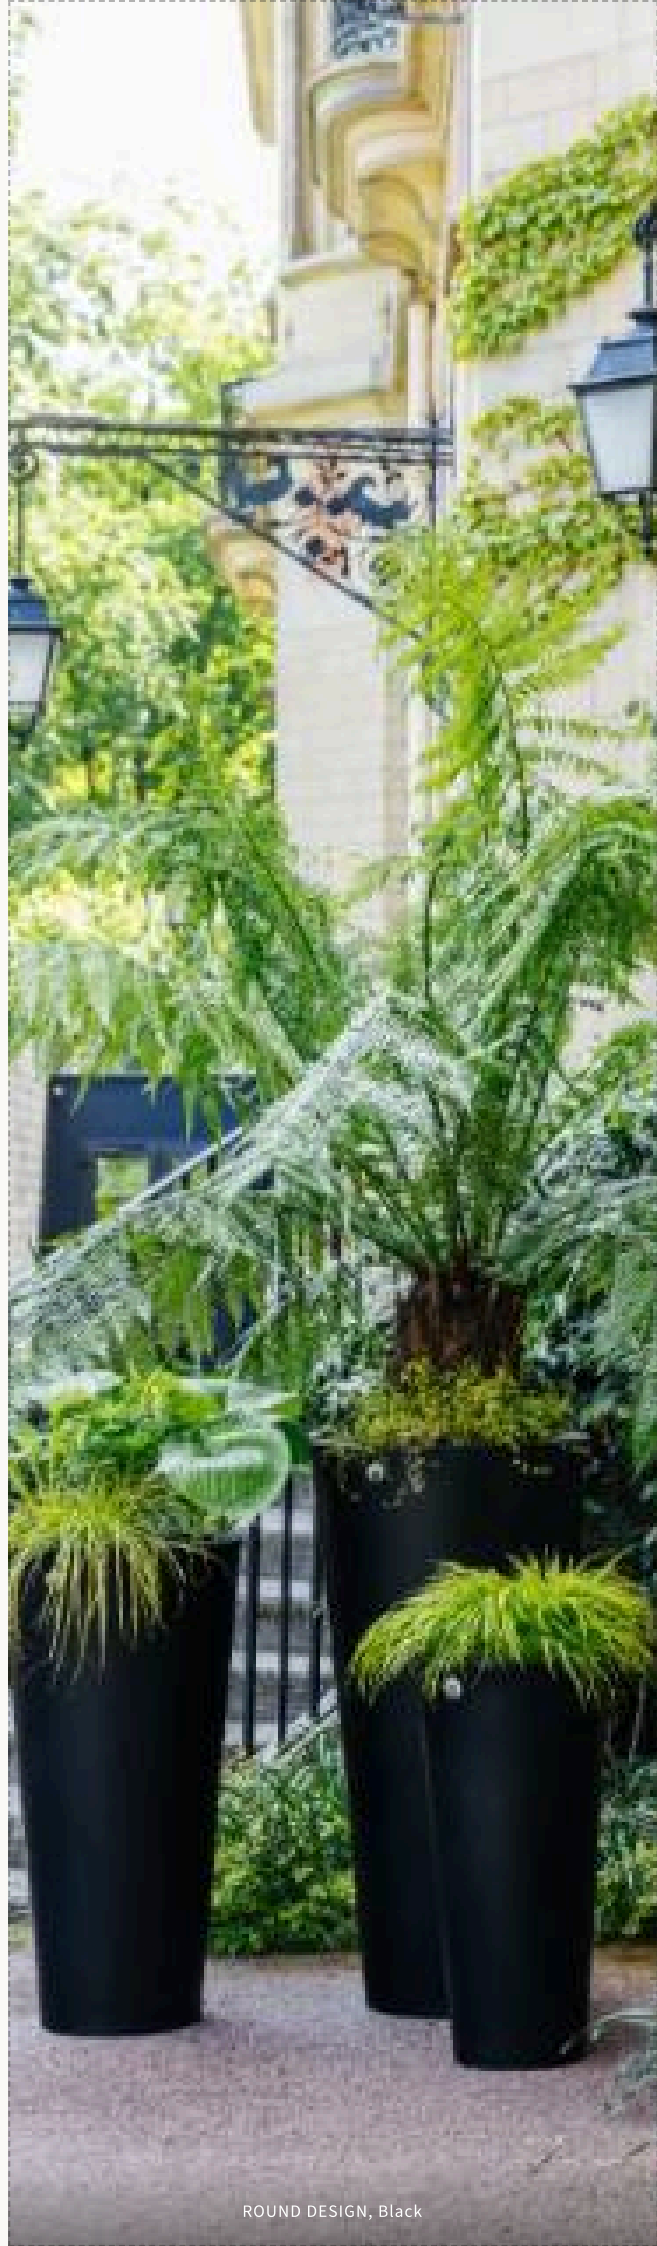

Every product you return becomes tomorrow's raw material. A virtuous circle that makes each planter a step towards sustainable, responsible production.

Together, we turn today's waste into tomorrow's solutions.

OUR PRODUCTS' LIFE CYCLE

- 01 Product collection
 - 02 Cutting, shredding
 - 03 Micronising
 - 04 Manufacturing
 - 05 Product in use
-

Collection, recycling, recovery: a complete circular economy since 2010.

SPECIAL FINISH

CORTEN

THE PATINA OF STEEL

A texture shaped by hand, piece by piece.

VOGUE ROUND, Corten finish

Corten effect

Inspired by Corten steel, this finish reproduces its weathered look and characteristic shades while keeping all the advantages of rotomoulded HDPE.

Applied entirely by hand, it gives each piece a unique appearance. Variations in tone and shade are an integral part of this handcrafted finish and add to its character.

Unlike Corten steel, the product retains all the properties of HDPE: light weight, easy handling and low heat absorption. A real advantage on large pieces.

The Corten finish combines the warm, authentic look of weathered metal with the durability and practicality of HDPE.

Hand-applied finish

Available across the range, except the Dune, Milano and Ora models.

MILEO, Corten finish

Detail, Corten finish

SPECIAL FINISH

VELVET

A UNIQUE TOUCH, REVEALED BY HAND.

A soft touch, achieved by hand by our
specialist technicians.

ATOLL, Olive green (V712), velvet finish

Velvet effect

Soft to the eye and to the touch, the Velvet finish gives HDPE a subtle, refined matt look. It brings out the product's lines and gives it a delicate texture that is particularly pleasant to touch.

Applied entirely by hand by our technicians, this finish transforms the look of the material and gives a lighter shade than the original colour, while keeping the identity of the chosen colour.

The Velvet finish keeps all the qualities of rotomoulded HDPE, combining elegance, strength and durability for both indoor and outdoor use.

Hand-applied finish

Available in every colour of our chart.

ROUND DESIGN, Olive green (V712), velvet finish

MOON, Taupe (G1519), velvet finish

Aquatic version

Designed as decorative water features, our aquatic version pots* have no drainage hole, ensuring they are fully watertight. This option turns each container into a small water feature, ideal for water lilies and aquatic plants, or for creating a natural ecosystem.

The design stays the same, but the uses widen: playing with water, depth and planting, the aquatic option opens a new, calm and poetic landscape dimension. Thanks to the strength of HDPE (high-density polyethylene), the structure stays solid while remaining watertight for long-term outdoor use.

* Only available on ATOLL (p. 17) and RODEO (p. 31).

ATOLL, aquatic version

TESTIMONIAL

“A miniature water feature doesn’t need a large garden: an elegant PAPI Mobilier bowl with aquatic plants creates a living focal point on any terrace. Choosing suitable plants is essential for balance and refinement throughout the season: a small water lily, marginal grasses and oxygenating plants make up a harmonious, lasting ecosystem.”

Clémence TREMBLAIS,
Co-Director of Aquamoine, aquatic plant specialist

OPTION

The LEVTOUT

- Pots on the move: relocate our pots wherever you like, without damage.
- The LEVTOUT strap lifting system fits all our pots except RODEO

How does it work?

Fixing

- Anti-tip fixing: availability is shown under options on each product page
- Ground anchor plate, optional

The container serving the plant

Successful planting depends on the right balance of substrate, drainage, water and available volume.

KEYS TO SUCCESSFUL PLANTING

WATER

Control watering and ensure good drainage.

SUBSTRATE

Choose a suitable, free-draining, airy mix.

VOLUME

Size the container to the plant's growth.

STRAIGHT, STRADDLING AND CURVED BALCONY BOXES

NEO, MILANO AND LINEO PLANTERS

Our planters and inner containers are supplied undrilled, so you can adapt them to your planting.
PAPI Mobilier

COLLECTION PLANTERS 2027

MURANO

THE WALL PLANTER

A planter that mounts on a wall, stands on the ground or sits in the ground, and draws water from existing gutters.

MURANO, Terracotta (TC)

WALL VERSION

FLOOR VERSION

BOTTOMLESS VERSION

FRENCH
MADE

100% RECYCLED
AND RECYCLABLE

MURANO

Ref.: MURANO

TECHNICAL SPECIFICATIONS

- Wall pot in 100% recycled and/or recyclable rotomoulded HDPE
- 30 L water reservoir and 50 L soil volume, sized for a climbing plant to thrive for several weeks without refilling
- Three installation modes: wall-mounted, free-standing or sunk into the ground
- Bottomless model available for planting directly in the ground
- Clay balls (not supplied): placed in the column and immersed in the reservoir, they draw water up to the substrate by capillary action

OPTIONS

- Gutter connection: the reservoir fills automatically from existing downpipes
- I.C.O.® removable support: a patented vertical greening solution by Pépinières Javoy, combining a removable support, bracket and climbing plant

TESTIMONIAL

"We chose MURANO planters for our patented ICO® removable façade greening solution. Their large capacity gives plants ideal room to grow and an anchorage perfectly suited to our innovation. Their look adds a discreet, elegant touch, while letting ICO® and our climbers take centre stage."

Marie-Laure RAULINE,
Co-Manager of Javoy, climbing plant specialist

HOW THE WATER RESERVOIR WORKS

- 1 WATER RESERVOIR**
Double wall, reservoir built into the lower section. Filled by normal watering or via a gutter (optional).

- 3 SUBSTRATE**
Light substrate suited to container growing.

OVERFLOW
Located at the back of the planter.

- 2 CLAY BALL TUBE**
The central tube draws moisture up to the substrate by capillary action. It stops at the reservoir's highest level.

- 4 PLANT**
Plants suited to the available volume and their surroundings.

- 5 GUTTER**
A gutter can be connected to the planter to fill the water reservoir automatically.

COLLECTION COMPOSTER 2027

HEDGEHOG

THE ROTATING COMPOSTER

A rotating composter with two 100-litre compartments, designed for educational and shared composting.

COLOURS AVAILABLE

Choice of 22 colours, see colour chart p. 7

INSTRUCTION STICKERS APPLIED TO BOTH DOORS

What goes in?

user guide

Yes:

- fruit and vegetable peelings
- nutshell peelings
- wild flowers
- eggshells
- plant-based leftovers
- shoe soles, heels, coffee grounds...
- dried branches & wood chips
- dried plants and leaves
- cardboard internal pieces

No:

- citrus fruit and peel
- cleared plants
- rotten meat, fish bones, milk
- plastic
- stones and sand
- metal and film
- oily products

How does it work?

user guide

- I drop my waste into the compartment
- I turn it 3-4 times with each addition
- The compost breaks down, thanks to the mixing
- I set the date indicator to record when fermentation starts
- I collect the compost when mature, after 8 weeks minimum (weather permitting)
